

Password Reminder App

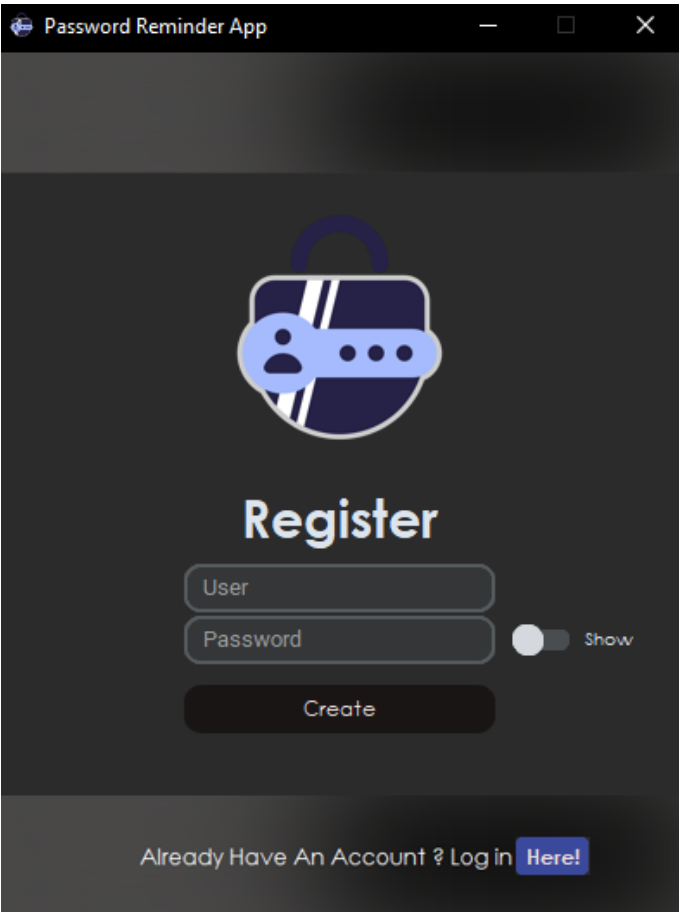

Allow you to store all your passwords in a database within the program, remember only your register data.

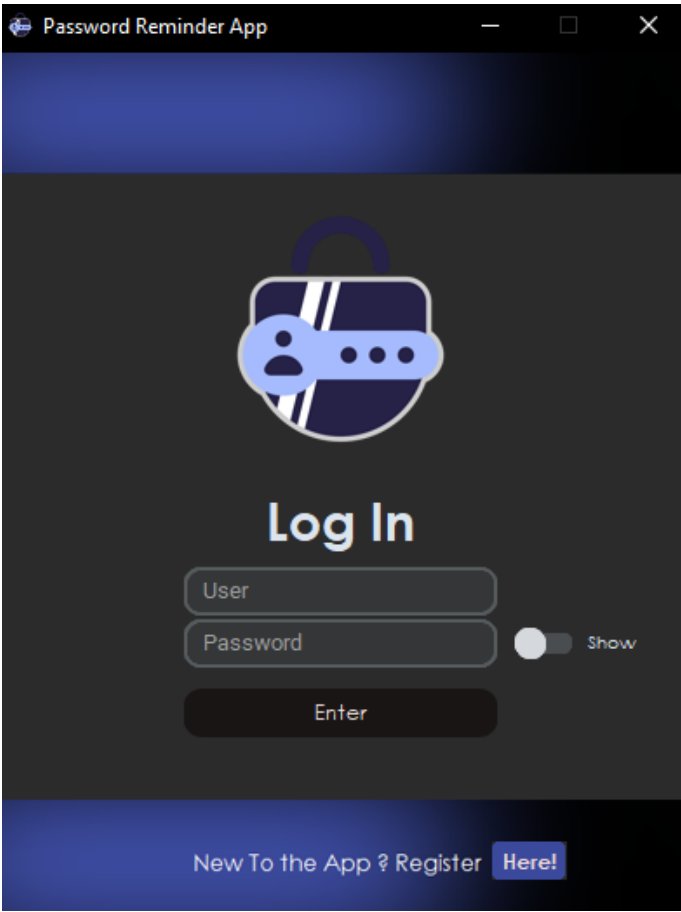

The main password and all your passwords are stored in the database and are not visibles. Both not be stored as plain text there.

The app provides you:

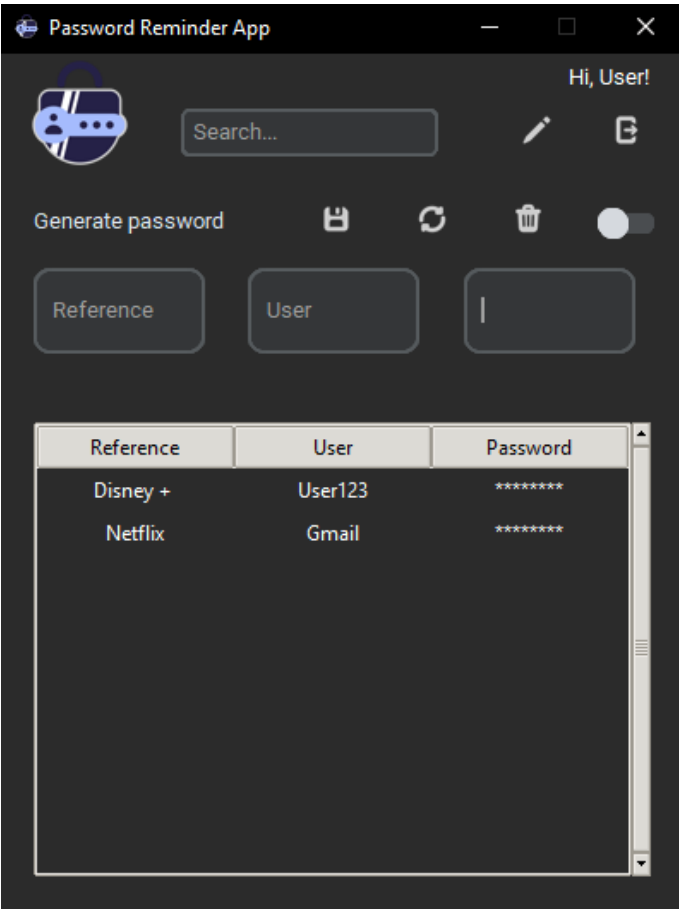

- ☐ A button to show/hide your passwords.
- ☐ A random tenth character password generator.
- ☐ A search engine for saved passwords, located by reference.

Main view

To Save

fill the the fields and press

To Edit

select the reference, make some changes and press

To Delete

a saved reference, select on it and press

The app run on Windows SO.

Technologies used in this project

The application is entirely developed in Python, following the OOP paradigm. It has a SQLite3 database, and the front-end design is based on customtkinter, a Python graphical user interface package.
